ABSTRACT

Programs of education and research on international economy and trade, foreign cultures and languages, and other aspects of international affairs and located in the western states are listed in an annotated directory. The units are of varying types and include informal interdepartmental committees within academic institutions, well-established centers, major institutions, voluntary organizations, campus-based and off-campus programs, and programs linked to institutions but funded or directed by government agencies. All units are focused on education, research, or public service oriented to other nations, and do not include traditional student exchange or foreign student programs. The listings are organized in these categories: international studies and centers not otherwise classified, East Asia, South and Southeast Asia, Middle East, Africa, Latin America, Canada, Western Europe, Soviet Union and Eastern Europe, and programs in less commonly taught languages in two- and four-year colleges and universities, presented by state and institution and by language. The states covered by the survey include Alaska, Arizona, California, Colorado, Hawaii, Idaho, Montana, Nebraska, New Mexico, Nevada, North Dakota, Oregon, South Dakota, Utah, Washington, and Wyoming. WICHE, the Western Interstate Commission for Higher Education, is a nonprofit regional organization, established by interstate compact, dedicated to helping 14 western states to work together to provide high-quality, cost-effective programs to meet the education and manpower needs of the region. Member states are Alaska, Arizona, California, Colorado, Hawaii, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, Washington, and Wyoming; North Dakota is an affiliated state. Through its Information Clearinghouse and other programs, WICHE provides information to higher education and government officials as they address important policy issues in the West.

Foreword

From its early days, the Western Interstate Commission for Higher Education (WICHE), through a variety of programs, has sought both the recognition and the extension of higher education's contribution to economic development. A current major interest at WICHE relates to international trade, and more broadly to education for international understanding and leadership in a world of interdependent nations.

As an expression of this interest, WICHE's staff undertook to identify "centers of expertise" in western states on matters pertinent to contemporary and practical problems related to the international economy and trade, foreign cultures and languages, and other aspects of international affairs. As our identification of such programs was extended, we concluded that brief descriptions coupled with contact names and addresses would provide a useful reference for those interested persons in business, government, schools, and colleges. In this effort we have endeavored to serve also the interest of the Western Governers' Association, which is directing special attention in 1986 to the international competitiveness of its member states and territories. To this end, we have included Nebraska and South Dakota institutions as well as the 14 WICHE states of Alaska, Arizona, California, Colorado, Hawaii, Idaho, Montana, New Mexico, Nevada, North Dakota, Oregon, Utah, Washington, and Wyoming.

We are grateful to the many individuals in colleges and universities, governmental and other organizations in the West who have supplied information for this report. We want especially to thank the Modern Language Association, which made available its Fall 1983 survey of foreign language enrollments, and the Amoco Foundation, Atlantic Richfield Foundation, Bechtel Power Corporation, Chevron Fund of the Denver Foundation, and Rockwell International Corporation Trust, whose support of WICHE's economic development program has helped with the printing and initial distribution of this report.

Preface

This document compiles information about programs of education and research that have a direct bearing on contemporary problems relating to the international economy and trade, foreign cultures and languages, and other aspects of international affairs. It is a first effort of the Western Interstate Commission for Higher Education (WICHE) to publish salient facts about international programs and centers of instruction, research, and public service. The objective is to provide information about programs in the western states that may relate to the problems, plans, or objectives of persons in business, teaching, or government service, or simply, of people wishing to extend their knowledge and skills.

Within higher education institutions, teaching or research units related to other nations or world areas, or to international affairs generally, are organized in many different ways. Ordinarily, the units which offer programs of instruction that lead to degrees (or to "minors" or "concentrations") are described in college and university catalogs along with the colleges, schools, and departments to which they organizationally relate. Often, however, research-oriented units, or public service-oriented units, are organized separately from the academic departments, schools and colleges, and their relationships to these units vary widely. Moreover, both academic programs and research units may evolve quite rapidly. Groups that begin to function informally may soon emerge as formal structures, sponsoring programs that should be included in a compilation such as this.

The units entered in this directory reflect the spectrum from quite informal interdepartmental committees to well-established centers with multi-million dollar budgets. They include major institutions whose programs relate entirely to international objectives, such as the American Graduate School of International Management (Arizona) or the East-West Center (Hawaii). There are voluntary organizations not campus-based--the Oregon International Council is an example. Some units that have ties to educational institutions are nevertheless authorized and funded, or perform functions assigned, by state or federal governments--such as the Joint Border Research Institute at New Mexico State University, or the National Coastal Resources Research and Development Institute in Oregon. We have required for inclusion that units be focused on education, research, or public service oriented to other nations or world areas (thus, have excluded programs focusing upon Americans, whether Asian-Americans, Mexican-Americans, Native Americans, or others). We have generally excluded programs of student exchange that primarily serve regularly-enrolled students (such as year- or semester-abroad programs) and programs for foreign students in the United States.

With the exclusions, however, we have chosen to err on the side of inclusiveness, both because of the belief that we cannot predict the range of information some users may seek, and because we anticipate that inclusiveness now will serve to identify for possible future editions additional programs that have been missed. It would seem that having identified more of the full range, we may be in a better position in the future to define additional criteria for entries.

We trust that the format and the brevity of the entries will simplify finding the references that most closely match a user's interest. Our hope is that users will be encouraged by the remarkable array of programs to raise their questions, certainly with any of the units included here but also with local institutions which may be able to help, even if no local program that is directly on the issue of interest is listed. Readers will recognize that help may be found also in places not cited in this document--libraries, museums, associations, schools are obvious examples.

As points of departure for this compilation we have used a listing of language and area programs published by the Modern Language Association in 1984; the Research Centers Directory, 9th edition, published by Gale Research Company; information relating to the National Resource Centers and other programs supported by the U.S. Department of Education under Title VI of the Higher Education Act; college and university catalogs for the year 1986; and random items from newspapers and journals. Gleaning what we could from these sources, we sent our drafts to the units for checking, and to a great many chief academic officers, including in institutions for which we had found no programs to include, as we sought to learn about centers we had missed. We have been able to include many additional references, as a result. We trust that through publishing this first edition with the expectation of updating and expanding it for republication, we can in the future remedy any serious omissions here.

In addition to the some 180 entries about "centers of expertise," this report presents listings of the colleges and universities where instruction in less common foreign languages is available--more precisely, where students were actually enrolled in the Fall of 1983. This is a reasonably complete listing for the languages included, though some programs have been started since that date which will not be in our lists. To simplify identification of locations, we provide two listings--first, by state and institution (both alphabetically), and second by language. As pointed out in the introduction of that section, we have excluded four major European languages which are generally available and some 50 ancient languages or languages otherwise less significant for international trade and affairs.

A major objective of WICHE is to encourage interstate and interinstitutional collaboration and resource sharing. International studies and foreign languages, vital as they are in higher education today, become high-cost programs as institutions move beyond the most popular world areas, topics, and languages into more advanced or specialized work. In the face of severe resource limitations now characteristic of most western states, maintenance of present efforts in language, area, and other international programs, let alone expansion of the kind that rising public interest seems to demand, are threatened by lack of funds. It is precisely this climate in which other regional service and education programs have been created through WICHE. In addition to other purposes, we hope this compilation will be used for plans and arrangements that serve to join forces in the interest of stronger and more cost efficient programs.

WICHE earnestly solicits readers' comments on this publication's usefulness and suggestions of how it may be made more useful.

Director, Student Exchange and
Economic Development Programs

Explanatory Note

In each of the following sections citing programs and centers, the entries are arranged in the following order:

States, alphabetically.
Institutions, alphabetically, within each state.
Programs and centers (when there is more than one in an institution), alphabetically within the institution.

In each entry the first line is the name of the center or program, and will be in alphabetical order only as to the centers/programs at the institution where it is located.

Programs in Less Common Foreign Languages in Western Two-Year and Four-Year Colleges and Universities

	Page
By State and Institution	68
By Language	75

These listings are based on the most recent national survey of foreign language enrollments conducted by the Modern Language Association (MLA). Reflecting languages in which students were actually enrolled in the Fall of 1983, these listings do not include programs that have been initiated after that date.

Because of the purposes of this compilation, which seeks to assist in current, practical applications of knowledge of foreign languages and affairs, some 50 ancient languages and languages of peoples native to North America are not included. And because French, German, Italian, and Spanish are available in most western communities, these major European languages are omitted as well.

WICHE is grateful for MLA's cooperation in making information from its 1983 survey available.
